

# HYDRAULIC DRUM LIFTER AND ROTATOR

**CAPACITY : UPTO 500 KGS, MAX.LIFT/HEIGHT: 1600 MM**  
**STEEL DRUM DIA CAPACITY : 400 TO 600 MM**  
**PUMP : HAND AND FOOT OPERATED. RELEASE : HAND OPERATED**

## PRODUCT DESCRIPTION :

The most cost effective drum lifter (for steel, plastic and fiber drums) on the market. We now provide a safe, spill-free and convenient way to handle, move and decant standard chemical and raw material drums.

The Drum Lifter is an easy way to handle your standard 210/225 litre (44/55 gallon) metal drums. It can safely lift, move and tilt your drums (for decanting) and can be used in just about any industry, including dangerous goods handling.

The innovative drum attachment method means that initial access to the underside of the drum is not required. The upper support mechanism is fixed to the top lip of the drum with a strong clamping action (allowing the drum to be raised), then the secondary lower securing clamp is positioned under the lower lip of the drum, providing a safe and secure connection.

The Drum Lifter has an overall width of only 900/1000mm, allowing it to be moved in restrictive workspaces and through narrow doorways.

With a capacity of 350 kgs (and upto 500 kgs) and a lifting height of 1600 mm, Drum Lifter is simple to use and a very effective way to handle your drums at a third of the cost of some other drum handling systems available on the market.

## FEATURES :

1. Small width profile allows travel through narrow doorways.
2. Manual pour mechanism for precise control.
3. Robust hydraulic ram with foot and hand lifting operation and hand lever release system.
4. Safety brake mechanism to prevent movement during decanting.
5. Has durable stress-relief weld joints for years of trouble free service.
